Indelible Pencils

Purple – 83U01.16

Red – 83U01.20

These indelible pencils leave a distinct, long-lasting mark on a moist surface (it is often helpful to wet the surface first with a spray-mist bottle). Suitable for use in scribes, they mark with very little pressure, allowing you to concentrate on accuracy.

The drawing lead in these pencils is made of materials that can easily break. Sharpening to a sharp point is not recommended. For best results, sharpen using the larger (11mm) hole of a two-hole hand-held pencil sharpener until the pencil tip is no smaller than half the lead diameter. The secret is to shave off just enough of the outer casing to expose the lead, while keeping the end blunt.
