

This plane is a scaled-down version of the Veritas® Medium Shoulder Plane. The body is investment cast stainless steel that has been accurately machined and surface ground. The plane features a functional Norris-style adjuster made from stainless steel.

Blade Adjustment

Should the blade adjustment mechanism ever get out of the proper configuration, reposition the parts as shown below.

Blade Sharpening

The 0.060" thick by 1/4" wide A2 tool steel blade has the bevel ground at a 25° angle.

To remove the blade, tilt it up off the adjustment mechanism and slide it out through the mouth opening.

***Note:** A corrosion-inhibiting paperboard chip is included in the case. It will provide continuous corrosion protection for up to two years.*
